Add your own music to video, like mp3 files and other format.- Lots of fun sound effects.- Add voice-overs.- Easy to sync sound and video, with timeline features.[Text & Emoji]- Add text on video and photo.- Add emoji on photo.- With timeline features, easy to sync text and emoji with video.[Filters and Effects]- Lots of cinematic filters- Unique effects such as glitch, noise, beats, retro DV, etc.[Video transitions]- Combine 2 clips with smooth transitions.- Make your video more eye-catching, editing video like a Pro.[Picture-in-Picture]- Add video and photo layers on main video.- Use chroma key/green screen to create a creative works.- Add mask to PIP. [Keyframe]- Add motion to layers(text, stickers, PIP) by using keyframe tool[For social media]- Blur border for photo and video. Make it square ready for Instagram.- Colored border to make it square ready.- Move video/photo inside the square.[Photo editing]- Add text and stickers to photos, make fun story.- Add filters and adjust brightness, contrast, curves and etc.- Make photo collage[Share]- High video output resolution. Now InShot support save in 4K, 60fps.- Share to social apps, like YouTube, Twitter, Instagram, WhatsApp, etc.[InShot Pro Unlimited Subscription]- With an InShot Pro Unlimited subscription, you have access to all features and paid editing materials including stickers, filter packages etc. Watermark and advertisements will be removed automatically.- InShot Pro Unlimited subscription is billed monthly or annually at the rate corresponding to the selected plan. In addition, a one-time payment will be offered if needed, which is not one of the subscription plan. Payment will be charged to iTunes Account at confirmation of purchase.- Subscription automatically renews unless auto-renew is turned off at least 24-hours before the end of the current period.- Account will be charged for renewal within 24-hours prior to the end of the current period, and identify the cost of the renewal.- Subscriptions may be managed by the user and auto-renewal may be turned off by going to the user's Account Settings after purchase.- Any unused portion of a free trial period, if offered, will be forfeited when the user purchases a subscription to that publication, where applicable.[Terms of Use] Privacy Policy] free to contact us: inshot.ios@inshot.com, your feedback and suggestions are important to us! For more InShot news and tutorials, follow us on YouTube @InShot Video Editor.[Disclaimer]:InShot is not affiliated, associated, sponsored, endorsed by, or in any way officially connected with YouTube, Instagram, TikTok, Facebook, Twitter.Acknowledgements:FUGUE Music Aug 3, 2022 Version 1.61.1 - New video animation feature- New style BG (pattern & texture)- Support reverse and freeze video in PIP- Smoother slow motion- Bug fixes and other improvementsEmail us at inshot.ios@inshot.com. Your ideas and feedback are important to us! Skip the stuff in parentheses because it's not that importantThe app is very good and every feature it has works the better than any app I've tried and is easier to use than any app I've tried but there should be some more developments as far as text effects and effects in general go. So like more transitions and more filters and way more video effects like we need vhs and all that jazz. An update like this would bring the app to another level. Tho I still prefer inshot because it's so easy to navigate and use. (like for instance, video star is a very good app with almost all the qualities I need to edit like a pro even if u don't have a computer i don't need one with video star but it's complicated af whereas inshot has all the basic edits that one would receive on their phone to edit and they work perfectly the way they word the effects is easy to understand which is something video star struggles with. Because all of us aren't editing experts and I don't know what half of VideoStars effects do because there's no explanation or little summary and/or it's worded the correct way and by correct I mean by the actual name. Which most of us have no knowledge of the actual name of effects we use everyday) Very intuitive and capable editing. Easy to learn how to use. Nice amount of special features that allow for some cool effects. Totally recommend this app. I'm having so much fun with it ☺ To the developers, please add two things for us to make the experience even better. 1 - When editing photos and adjusting the slider values, make it so that the adjustment is viewable in real time. So as we are moving from 0 to 100% of an effect, contrast, saturation etc. the change is viewable as the slider is being moved. Right now it's drag, select, and then the change is viewable. This makes finite adjustments very challenging. Weird because the video editor adjustments are viewable in real time but the photo editor is not. 2 - Much less important than the previous request, while in the effects tab it would be nice if the value slider had numbers 0-100% just like the adjustments tab. I'd prefer to have the effect slider look exactly like the adjustments slider. The dot and line are more intuitive and precise than the colored bars without numbers. And finally Thank You all for your efforts to bring us this wonderful media editing app ☺☺ This is by far the best video editor app I've ever used. I'm a new vlogger and i get the most vlog-like videos using it. It allows me to speed up or slow down my videos, add filters/ adjust brightness, contrast, saturation etc, I can also add pictures to my videos and record voice clippings in the app. There's also a feature for adding text to the screen. However, my biggest problem is the saving process. I make >4 minutes videos and it takes like half an hour to save videos. Sometimes after I've waited that long it goes off to say that 'save failed' and I have to do it all over again! Very frustrating. Next thing is I can only save one draft at a time so I can't edit 2 vlogs at once or else the other one will be deleted. I also don't like it that sometimes if I pause my editing and go do something on other apps, when I re-enter the app, all my editing has been lost. I would like to be able to use actual songs instead of just tracks and sound effects. Lastly, it would be nice if the app noted me that I need a little more storage space BEFORE I wait almost an hour for a video to process and then I have to try clear some space and go back in the app only to find that my editing has been lost and I have to do it all over again. Other than these things, editing my videos for my new vlog is easiest using InShot. I would recommend it to anyone. Thank you for your comment, we will improve on it. The developer, SHANTANU PTE. Learn More Developer Website App Support Privacy Policy Video editing is a processor- and memory-intensive task that has traditionally required the resources of a desktop computer. In the last few years, though, the resources in a smartphone have caught up, and now there are a slew of video editing tools you can use to edit video on your phone. Here are seven of the best free video editing apps you can get for your iPhone or Android. KineMasterKineMaster is a traditional video editor that's been packed into a smartphone screen. The display is landscape, which makes it easier to see your video timeline at the bottom of the screen, preview at top and tools on the right. You can trim, split, slip, reverse, pan and zoom, and mirror your video; you can also apply filters and make exposure adjustments. You get a full-bore video editor with the ability to add multiple video and audio tracks as well. And while the core features are free, upgrading to the paid version removes the watermark from the finished product and access to a generous store of assets. It's available for iPhone and Android. KineMaster is a powerful and full-featured video editor for your phone. Dave Johnson PowerDirectorSimilar to KineMaster in overall scope of features and ease of use, PowerDirector for iPhone and Android lets you work with multiple video tracks, audio tracks, and do a lot of the sorts of editing you'd do on the desktop — including trimming and splitting video, adding filters, adjusting color and exposure, and so on. Some features, like digital stabilization, are only available if you upgrade to the paid service, but both the free and paid versions of the app have a handy auto-rotate interface that lets you use it in portrait or landscape orientation. Vimeo CreateNeed to create polished short-form videos for social media or other online applications? Vimeo Create lets anyone take video clips and incorporate them into a wide variety of templates on both iPhone and Android. You can customize colors, text, fonts, filters, and more, and even choose from a large catalog of royalty-free music options. Even when just using the free version, there are plenty of free templates and features, but you can upgrade to the paid plan to unlock additional templates (and the 30-second video limit). Vimeo Create doesn't look or behave like a traditional video editor, so you don't need any video skills to start using the app immediately. Vimeo Create simplifies the process of rapidly making videos for social media. Dave Johnson GoPro QuikYou don't need a GoPro camera to use GoPro Quik for iPhone or Android. Free for anyone to use, the app excels at making a highlight reel from video clips you specify. Just choose the videos, add a title, choose some music, and Quik uses AI to find the most compelling video bits for you. There are some other editing options at your disposal, but the appeal here is Quik's ability to whip up fun videos with little effort. iMovieiMovie is the only video editing app here that's only available for the iPhone (it is an Apple product, after all) but it's worth including for iOS users because of its ease of use and elegant interface. The app has a Magic Movie mode in which the app does almost everything automatically — just choose the clips and let the app take it from there. Even so, you can tweak the theme, title text, and music, or make a movie from scratch and control all those elements from the start. Either way, your options are more limited than what you get with a full-strength video editor than something like KineMaster. You can make a polished video with just a few taps using iMovie. Dave Johnson SplicePacking about the same punch as KineMaster and PowerDirector but without being hassled with in-app ads or to constantly upgrade for additional features, Splice is one of the best free video editors for iPhone and Android. It has a clean and easy-to-master interface that has a timeline and video preview, with the ability to trim, clip, filter and adjust colors and exposure of your video clip. You can also add titles and music, add closed-caption subtitles, and more. CapCutCapCut for iPhone and Android works like a standard timeline-based video editor and has a healthy assortment of editing tools, like split, speed, and exposure controls. It also has some cool additions you won't find in a lot of other video editors, like the ability to automatically remove the background, leaving just your foreground subject in a sea of black. There's also audio tracks, title text, stickers, overlays, and more. But the most interesting feature in CapCut is its ShortCut option. ShortCut will make a TikTok-friendly video, complete with transitions and effects, with a single tap after selecting the clips to include. That's not surprising — CapCut is published by Bytedance, the owners of TikTok. CapCut has an impressive array of video editing features in an easy-to-use interface. Dave Johnson
